Another Victory for Lac Hong University!

The National Vietnam Robocon 2011 was held at Tien Son Sport Complex in Danang City, in the central of Vietnam from May 9 to 15.

To celebrate the 10th anniversary of the ABU ROBOCON as well as the National Vietnam Robocon, we organised a special musical gala show called 'Flying Dreams' on the eve of the opening of the contest. The concept of the show was created from the Vietnamese students who have evolved with the Robocon in the last decade since the project was first introduced in 2002.

The competition was fierce. As many as 524 teams from across the country took part in the preliminaries held in 3 regional contests in April. Among them, 32 teams made it to the finals.

LH-B7 team from Lac Hong University achieved Loy Krathong in an accurate yet graceful manner in less than 2 minutes, winning the champion title.

It was their second grand victory at the Robocon Vietnam following last year. Their performance was accredited with world class when they won the 1st runner-up at the ABU ROBOCON 2010 Cairo-Egypt.

During the 6 days of the contest, 'Robocon Techshow' was held where unique and creative products made by students from around the country were exhibited. Another event that attracted a big crowd was 'Robocon Open', a hands-on robot assembling seminars for high school students. Such experimental and practical activities offer students a chance to apply the expertise they gained in the classroom as well as to inspire their creativity and inventiveness.
